

**Define your problem statement**  
To provide an Efficient communication app which translates the hand signs into text and voice mode for deaf and dumb people.

Springer

**PROBLEM**

can we provide  
t communication  
for disabled ones?

**Key rules of brainstorming**  
To run a smooth and productive session

 Stay in topic.	 Encourage wild ideas.
 Defer judgment.	 Listen to others.

Go for volume. If possible, be visual.

Write down any ideas that come to mind that address your problem statement

10 minutes

**TIP**  
You can select a sticky note and hit the pencil (switch to sketch) icon to start drawing!

VISHWA

Convolution Neural Networks is to be used to take hand sign as an input to extract edges, corners

**Feature**  
extractions like  
alignments of the  
finger, palm  
position are taken  
into consideration

Hand tracking can be done using clustering algorithms that treat each finger as cluster and identify exact sign

Speech Synthesis is a software that converts text to artificial speech.

Media Pipe framework can be used for face detection and recognize hand, hand keypoints

Vision based  
recognition is  
used i.e. the  
computer capture

The input image should be fetched with a speed of 20 frames per second

If training and testing gestures are matched then voice of text is generated

Approximately,  
distance  
between hand  
and camera is  
around 30 to  
100cm

SIVAJI

If the system recognize unrecognizable gestures, it will be refreshed again for users

Webcamera capture the hand movement and provide as input to Tensorflow object detector

AADHI SIVAN &amp; DEEPAK

CNN performs training and verification of the recognized gestures	Dataset is used for training CNN. One dataset for hand detection and the other for gesture detection
---	---

When features are extracted, they are sent to the classification algos like SVM to produce output

Voice assistant is implemented that take input as speech patterns and convert the text to voice.

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

75 minutes

**TIP**  
Add custom table tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as they go within your mind.

**Importance**  
If each of these tasks could get done without any difficulty or cost, which would have the most positive impact?

Media Pipe framework can be used for face detection and recognize hand keypoints	Hand tracking can be done using clustering algorithms that treat each finger as cluster and identify exact tips	Convolutional Neural Networks is to be used to take hand sign as input to extract edges, corners	Support Vector Machine is the clustering algorithm to be used for the hand tracking
	Feature extractions like alignments of the finger, palm position are taken into consideration		When features are extracted, they are sent to the classification layer like SVM to produce output
CNN performs training and verification of the recognized gestures		Voice assistant is implemented that take input as speech patterns and convert the text to voice.	
	Speech Synthesis is a software that converts text to artificial speech	The input image should be fetched with a speed of 20 frames per second	Webcamera capture the hand movement and provide an input to TensorFlow object detector
Background light either too bright or too dim will result it inaccurate hand sign			System is very sensitive. It can catch any image with the camera. It is necessary to have clear gesture identification

### Feasibility

After  
preprocessing ,  
input is stored  
frame by frame  
into matrix

System is very  
sensitive , it can  
catch any image  
with the camera ,  
it is necessary to  
have clear gesture  
identification

Background  
light either too  
bright or too dim  
will result in  
inaccurate hand  
sign

If training and  
testing gestures  
are not matched ,  
then System gets  
refreshed from  
start
